Purpose of Inspection:

To determine if the vegetation has improved from the year before and the site could potentially be released.

Inspection Summary:

The site vegetation has improved somewhat, but still needs to be reseeded and fenced as was agreed to in the BLM lease agreement.

Conclusions and Recommendations:

Cover from perennials or native annuals on the reclaimed area is less than 70 percent of the cover in adjacent undisturbed areas. I do not believe there are enough seedlings to provide the growth needed to meet the revegetation success standard, and I recommend that the operator reseed this fall immediately after scarifying or lightly ripping the surface. No bond should be released for revegetation.
